

Automated Fleet Fueling System

The *4 C's of Fleet Fueling*...

- **CONVENIENCE**

We'll issue fuel cards to your company to be used by your drivers. Cards may identify specific vehicles, drivers or both. Your drivers will then have access to any of our conveniently-located sites, seven days a week!

Here's how it works:

Drivers insert their card into the card reader on the pump at the fuel island, just as you would your debit or credit card. Drivers will receive a receipt after dispensing fuel and continue on their way – no standing in line to pay or waiting for service. All transactions are recorded and reported back to you.

- **CONTROL**

Unauthorized purchases are virtually eliminated with our system. As a fleet owner, YOU specify fuel type and volume by vehicle, as well as authorized personnel.

Every month you will receive an account of fuel purchases by vehicle, showing driver, location, time and date, fuel type, cost, odometer reading and more. These easy-to-read reports will be fundamental in evaluating your fleet performance. No other system offers greater control.

- **COST REDUCTION**

By utilizing our fueling system, your savings will be obvious in many ways. You will save money in costly inventory and possible EPA storage liability from operating company-owned tanks. No more worries over unauthorized use, which can be a costly issue. In-house accounting time and staff can be reduced by implementing this system.

- **CUSTOMER SATISFACTION**

More and more commercial fleet operators are realizing the benefits of automated fueling service. If you feel YOUR company would benefit from:

- Availability every day of the week at convenient locations
- Virtually no unauthorized purchases
- Cashless transactions
- Detailed management reports
- Reduced cost
